

Can PCI-listed P2PE v3 components be used as part of a P2PE v2 solution?

PCI SSC FAQ | Article 1478 | May 2020

Only the PCI-listed P2PE v3 component types that also exist in P2PE v2 may be used in a P2PE v2 solution assessment, which are:

- Encryption Management
- Decryption Management
- KIF
- CA/RA

The new P2PE v3 component types (POI Deployment, POI Management, Key Management, Key Loading) can only be used as part of a P2PE v3 component or solution assessment.
